

Table of Contents

Welcome to the Alpha Five Xbasic Toolboxvi
What you'll find herevi

1 Learn the basics!

Support...2
Credit where it is due...2
 Sample database 2
Programming in Alpha Five3
 Xbasic is similar to Visual Basic 4
 Get some support 4
 Get the Set 5
Understanding basic terminology5
Understanding script syntax.....6
 Alpha Five uses Xbasic, too! 7
Running a script8
 Using the sample workspace 8
Understanding the Code Editor10
 Understanding the Code Editor features 11
 Using the Code Editor Toolbars 12
 Using the Right-click Menu 15
 Using the Top Menu 16
Understanding the Interactive Window17
 Using the Interactive Window 18
 Clearing the Interactive Window 18
 Displaying results 19
 Entering syntax correctly 19
 Evaluating multiple lines 20

2 Compose the code!

What's inside this chapter.....24
Preparation for the exercise.....25
Understanding Variables25
 Defining and using variables in the Interactive 26
 Understanding implicit and explicit declarations 27
 Determining the variable type 28
 Variable types 28
 Combining a variable with a function 29
 Naming variables 29
 Explicit declaration of variables 30

Dimensioning and using variables 31

Writing expressions..... 32

Annotating or “commenting” scripts 35

Understanding Objects, Properties, and Methods..... 36

Understanding objects in Alpha Five 38

Understanding sub-objects 39

Understanding Object Events..... 40

Modifying object events 41

Understanding system objects 44

Understanding Object Addresses..... 45

Using the Script Recorder 46

Understanding explicit and relative references 47

Understanding object Aliases 48

Understanding the Object Explorer 48

Editing event code 54

Understanding the Popup Editor 54

Understanding the Code Explorer 56

Manipulating Objects..... 57

Using the Sign-in form 58

Combining events and variables 59

Defining the OnInit event 62

Defining the OnPush event for Button1 63

Using Bubble Help auto-fill with sub-objects..... 66

Using auto-fill with sub-object references 67

3 Get the bugs out!

Preparation for the lesson..... 71

Understanding the Debugger..... 71

Reviewing the sample form and its code 71

Calling up the Debugger from within a script 73

Understanding the Debugger window 74

Processing in the code view section 75

Using the Watches section 75

Tracing into commands 76

Loading a local script into the Debugger 77

Advancing over a local script 78

Step – advancing to the next command 79

Removing the debug() statements 79

More about the Debugger..... 80

Running the Debugger from the Code Editor 80

Understanding breakpoints 80

Navigating in the Debugger 81

Using the debugger in web applications 81

Debugging background threads 82

Understanding the profiler 82

4 Refine the script!

What's in this chapter...	86
Understanding Variable Scoping	87
Why do variables need to be scoped?	87
Understanding the scope levels	87
Understanding where variables are defined	88
Defining workspace start-up variables	90
Defining layout level variables	90
Viewing the form	91
Defining message boxes	92
Viewing an OnPush event script	92
Playing a saved script	93
Using the correct function to call up a script	94
Defining variable scope	94
Using Functions at the Code Editor	97
Using the Function Finder to find a function	98
Creating Global (User Defined) Functions	99
Examining a global function	100
Defining a new global function	103
Completing the code	104
Testing in the Interactive	105
Using the function on a form	106
Creating a Local User Defined function	107
Using the Code Editor Library	108
Creating a new library	108
Adding code to the library	109
Using Code Library entries	109
Deciding where to put your library entry	109
Using the HTML Libraries	110
Understanding the Xbasic Explorer	110
Drag-drop from the Xbasic Explorer	111
Understanding Pointer, Dot and Array Variables	112
Defining pointers	112
Defining dot variables	113
Defining array variables	114
Creating Dialog Boxes	117
Using Xdialog	117
Understanding Classes and Enumeration	120
Using Classes	120
Using Enumerations	122
Understanding Global Scripts	123
Putting it all together	124

Analyzing the script 125
Using array variables 126
Opening the dialog 128

5 Take Action! Save Energy!

What's in this chapter	132
Using Action Scripting to learn code writing	133
Creating a script with Action Scripting 133	
Using Action Scripting to learn Xbasic 134	
Checking for errors 135	
Increasing efficiency 136	
Creating dialog boxes with Action Scripting	136
Using Action Scripting in Dialog components	137
Creating a message box with Action JavaScript	138
Looking under the hood	141

6 Take it to the world!

What's in this chapter	144
Preparation for the exercises	144
Begin at the beginning	145
Hand coding in web applications	145
Understanding the Client / Server model 146	
What is JavaScript 148	
What is AJAX? 149	
What is best? SQL or DBF??? 149	
What is an event handler? 151	
Understanding how to write the code 152	
Understanding where to write the code 152	
Understanding the Code section	153
Writing server-side events 154	
Writing client-side events 154	
Writing Xbasic functions 158	
Writing JavaScript functions 158	
Writing JavaScript for button and hyperlink events	158
Understanding Xbasic property settings	160
Using grids on the desktop 160	
Understanding JavaScript property settings	163
Overriding default Styles 164	
Customizing JavaScript dialogs 164	
Defining row events 167	
Defining system events 167	
Defining JavaScript function declarations 168	
Linking external JavaScript files 168	

- Using watch events 168
- Creating Server-side and Client-side Events170**
 - Defining a default value for a field 170
 - Understanding default values 171
 - Defining the server-side event 171
 - Defining the client-side event 172
- Creating an AEX Library172**
 - What to put in the AEX Library 173
 - When to use an AEX Library 173
 - Creating an AEX file 174
 - Setting up the project properties 174
 - Publishing edited files 175
 - A5w_load_aex() function disabled 176
- Creating a function and saving it to the AEX Library176**
 - Creating a function at the Code Editor 176
 - Creating the AEX Library 177
 - Adding a field to the table 177
 - Defining the AEX Library for the Web Project 178
 - Placing the function in a custom control 178
 - Publishing the files 179

7 Create AJAX Callbacks!

- What's in this chapter...182**
- Hope you can swim...183**
- How the material is organized.....183**
- Understanding AJAX Callbacks.....183**
 - Keeping it simple 184
 - How it works 184
- Performing an AJAX Callback on an .A5W page.....185**
 - Creating the pages 186
 - Loading the JavaScript libraries 187
 - Publishing the pages 188
 - Here's what happened 188
- Creating custom AJAX Callbacks for web components.....189**
 - The videos 190
 - Setting up the component 191
 - Adding the component to the web project 192
 - Establishing the connection 192
 - The scenario 193
 - Defining the Action JavaScript settings 195
 - Defining the function prototype 196
 - Creating / editing the code 196
 - Calling up the Debugger 198
 - Understanding the 'e' object 198

- Examining the contents of the ‘e’ object 199
- Examining the contents of the ‘e’ object (cont.) 203
- Using Firefox Firebug 206
- Creating the prompt 208
- Understanding how Action JavaScript uses Xbasic 210

8 Get Help!

- How the material is organized 225**
- Asking for help 225**
- Understanding the Documentation Viewer (DV) 226**
 - Getting off to a strong start 226
 - Display and navigation 227
 - Searching for topic pages 228
 - Saving page references 231
 - Taking notes 232
 - Printing topics 234
 - Updating the documentation 234
 - Window style 235
 - Restoring open pages 235
 - Sending feedback 235
- Using the Video Finder 236**
 - Filtering 236
 - Hybrid videos 237
 - Help on functions 237

9 Like the tools!

- What’s in this chapter 240**
- Using the Toolbox 241**
 - A quick review ... 241
- Writing code in web components 242**
- More on the Debugger 243**
- More on Dialogs 244**
- More on the Interactive 244**
 - Using the Interactive to write a custom function 244
 - Changing the variable frame 245
 - Using the Interactive at layout design 245
- More on Libraries 245**
 - Loading and attaching an AEX Library 245
 - Make AEX files universally available with addins 247
 - Using other libraries 248
- Creating a Connection String 248**
- Getting More Info 249**
 - Sample Applications 249
 - Feature Packs 250

Books and Videos 251
The Message Board, Linked-In and Mentoring 253
